

## ABSTRACT

A method for detecting a type of one of plurality of devices attached to a graphics machine, each device being one of at least a first type and a second type, the method comprising detecting at a controller the type of device attached to or to be attached to the machine. The controller is capable of preadjusting the device or machine as a function of the detection. A graphics machine includes a controller, a first device connected to the controller, the first device being categorizable as one of at least a first type and a second type, the controller detecting the type of the first device, and a memory accessible by the controller, the memory storing information regarding the first type and the second type.
